Product & Tech Assignment

Build a business that runs on Claude, with no AI inside it

DEADLINE	VIDEO	AI INSIDE YOUR APP
24 hours	**5 minutes maximum**	**None**

THE IDEA

Most AI apps pay an AI company, like OpenAI or Anthropic, every time a customer uses them. That makes them expensive to run.

We want you to build the opposite. Your customer already pays for Claude or ChatGPT. They connect it to your app, and **Claude does all the thinking and writing. Your app does everything else.**

Your app has no AI inside it and pays nothing for AI. It does what Claude can't do on its own: it stays live on the internet, serves real people and keeps working after the chat ends.

What is MCP? MCP (Model Context Protocol) is how you connect an app to Claude. You give your app a few actions, like "add product", and Claude can then use them. Think of it as a plug between Claude and your app. Start here: modelcontextprotocol.io

TWO EXAMPLES

EXAMPLE 1

Website builder

A marketer types into Claude: "Make a landing page for our new product." Claude writes the page and sends it into your app. The marketer changes a few words in your app and publishes it.

Claude writes the page → your app edits it and puts it live

EXAMPLE 2

Online shop

A shop owner gives Claude a photo of a product. Claude looks at it and writes the name, description, price and tags, then sends them into your app. The product appears in their online shop, ready to sell.

Claude reads the photo → your app runs the shop

In both examples, Claude does the hard AI work, and the customer's own Claude plan pays for it. Your app keeps the result live and useful.

YOUR TASK

Start your own business

Come up with your own business that works this way. **It cannot be a website builder or an online shop.** Pick something people would really pay for.

Then build a working first version. It must:

- **Work from Claude.** We type a request in Claude, and something real is created in your app.
- **Let a person change it.** We can open your app, see what Claude created and edit it.
- **Be live on the internet,** so we can try it ourselves.
- **Have no AI inside.** No OpenAI, Anthropic or other AI keys anywhere in your app.

You have 24 hours, so keep it small. One thing that works well beats many things that half work.

THE VIDEO

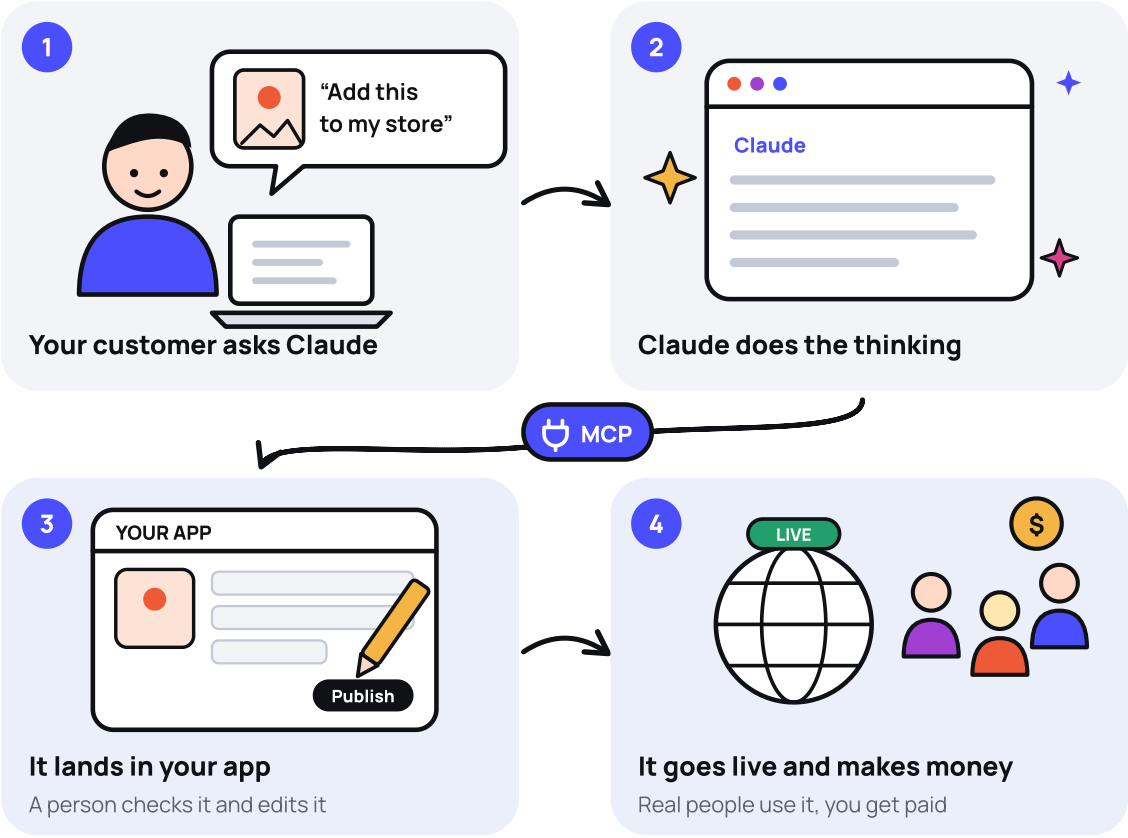

Pitch it to us in 5 minutes

Pitch your business as its founder. Record one video of **5 minutes or less**. Longer videos will not be watched.

1	**Who you are** Introduce yourself as the founder and tell us your background.	45 sec
2	**Your best work** One thing you did really well. Show numbers or proof.	30 sec
3	**Why this business will win** Who is it for? What problem does it solve? Why do people need your app, and not just Claude?	1 min
4	**Demo** Type a request in Claude, show it appear in your app, then edit it.	2 min
5	**The money** What does it cost you to run for each customer? What will you charge? How will you get your first 100 customers? Where will the business be after 1 year and after 3 years?	45 sec
Total		**5 minutes maximum**

THE BIG PICTURE

How it works, using the shop example

Claude does

Reading photos, thinking, writing. Paid for by the customer's own Claude plan.

Your app does

Saving, editing, keeping it live, serving real people. You only pay for hosting.

WHAT TO SEND

1

Your video

A link to your video, 5 minutes or less.

2

Your live app

A link we can open. If it needs a login, give us a test username and password.

3

Your MCP link

With simple steps to connect it to Claude.

Use any tools you like. Using AI to help write your code is fine. AI inside your app is not.
